

Disclosure theory

Interpretation:

Interpretation: Debaters must disclose non-identity based constructive and rebuttal evidence with full texts of cards and full highlighting on the HS PF 2025-2026 open case list wiki - specifically their team and school in the correct round at least 30 minutes before the current round for all NSDA/TOC circuit tournaments.

Violation–

They didn't disclose on the wiki - Screenshots prove

12:24 is not 30 mins before the round – meaning it gives us less time to access the standards diminishing the activity as a whole.

Standards–

1] Debate resource inequities—you'll say people will steal cards, but that's good—it's the only way to truly level the playing field for students such as novices in under-privileged programs.

2] Evidence ethics – open source is the only way to verify pre-round that cards aren't miscut or highlighted or bracketed unethically. That's a voter – maintaining ethical ev practices is key to being good academics and we should be able to verify you didn't cheat.

3] Depth of clash – it allows debaters to have nuanced researched objections to their opponents evidence before the round at a much faster rate, which leads to higher quality ev comparison – outweighs cause thinking on your feet is NUQ but the best quality responses come from full access to a case.

30 minutes before is a good norm and allows us to fully examine evidence.

D] Voter:

The impact is fairness—a] it's an intrinsic good – debate is fundamentally a game and some level of competitive equity is necessary to sustain the activity,

Education is a voter – it gives us portable skills for life like research and thinking.

Drop the debater –

a) they have a 8 min rebuttal and constructive advantage to make args I can't respond to, b) it deters future abuse and sets a positive norm.

Use competing interps –

a) reasonability invites arbitrary judge intervention since we don't know your lying meter, b) collapses to competing interps

No RVIs –

a) illogical – you shouldn't win for being fair – it's a litmus test for engaging in substance, b) norming – I can't concede the counterinterp if I realize I'm wrong which forces me to argue for bad norms, c) encourages theory baiting to win on the RVI
They can't weigh the case—lack of pre round prep means the\ir truth claims are untested which you should presume false—they're also only winning case because we couldn't engage with it.

Aprior Spec THEORY:

Interp: Debaters must specify a delineated text in the 1AC/1NC whether there are A prioris or not.

To clarify, A prioris are independent reasons to affirm/negate

Violation: They don't spec

Norming – Hidden Aprioris ruin the educative value of debate by skirting clash which creates a competitive incentive to exclude debaters with learning disabilities by hiding tricks. Kills fairness via exempted or hidden tricks that moots the (x). Spec Solves – It alerts debaters to contest arguments AND disincentivizes nonstarter cheapshots.

Fairness is a voter - debate is a competitive activity that requires fairness for objective evaluation.

Drop the debater to deter future abuse.

Competing interps – [a] reasonability is arbitrary and encourages judge intervention
[b] it creates a race bottom of questionable argumentation.

No RVIs – [a] illogical, you don't win for proving that you meet the burden of being fair
[b] RVIs incentivize baiting theory and prepping it out which leads to maximally abusive practices

Should implies an obligation:

Oxford Languages. (2025). Oxford Languages; Oxford University Press.
<https://languages.oup.com/google-dictionary-en/>

used to indicate obligation, duty, or **correctness**, typically when **criticizing** someone's actions.
"he should have been careful"

An obligation implies morality

Definition of OBLIGATION. Merriam-Webster.com (2018)
<https://www.merriam-webster.com/dictionary/obligation>
an act or **course of action** to **which a person is morally** or legally **bound**; a duty or commitment. Definitions from Oxford Languages · Learn more

[4] INDUCTION. The circularity concern makes inductive premises logically incoherent.

Henderson 18 — [Henderson, Leah, 3-21-2018, "The Problem of Induction (Stanford Encyclopedia of Philosophy)," No Publication, <https://plato.stanford.edu/entries/induction-problem/>, accessed 1-30-2023]

Most observed Fs have been Gs

Therefore: Most Fs are Gs.

Hume claims that such arguments presuppose the Uniformity Principle (UP). According to premises P7 and P8, this supposition also needs to be supported by an argument in order that the inductive inference be justified. A natural idea is that we can argue for the Uniformity Principle on the grounds that "it works". We know that it works, because past instances of arguments which relied upon it were found to be successful. This alone however is not sufficient unless we have reason to think that such arguments will also be successful in the future. That claim must itself be supported by an inductive argument (S):

Most arguments of form X that rely on UP have succeeded in the past.

Therefore, most arguments of form X that rely on UP succeed.

But this argument itself depends on the UP, which is the very supposition which we were trying to justify.

As we have seen in section 2, some reject Hume's claim that **all inductive inferences presuppose the UP**. However, the argument that basing the justification of the inductive inference on a probable argument would result in circularity need not rely on this claim. **The circularity concern can be framed more generally. If argument S relies on something which is already presupposed in inference X, then argument S cannot be used to justify inference X** The question though is what precisely the something is.
